

2"(50mm) & 4"(100mm) Angle Grinders (Governed & Non-governed)

These 2" and 4" handy angle grinders are ideally suited for close-quarter work with less operator's fatigue. Both AG-50 and AG-100 series grinders are available with two different throttle handles. The self-closing lever throttle handle is suitable for intermittent operation and the sleeve type throttle handle is for continuous operation. The governed models are recommended for heavy-duty production grinding.
